## STRATEGIC PATHS AND MEDIA MANAGEMENT OF LOCAL AREA NEWS PAPERS PLANNING

**DR. RAJESH PYDI.**

Centre For Dr, Ambedkar Chair, Acharya Nnagarjuna University, Nagarjuna Nagar. Guntur.  
Andhra Pradesh. India -522510.

### **ABSTRACT.**

*The study will investigate the strategic paths and media management of local area newspapers in Andhra Pradesh. The local area newspapers otherwise called community newspapers are published from different cities of Andhra Pradesh. These papers mainly depend on advertisement income. Because of stiff competition from established regular newspapers, the strategic paths and media management of local area newspapers is different and unique to reach more specifically the target population for whom these papers are being published. Stratified sampling method is followed in this study, out of the total population, that is, the total number of local area newspapers from different cities of Andhra Pradesh. Only ten papers from Vijayawada, ten from Visakhapatnam, ten from Guntur, five from Kadapa and five from Nellore were selected as samples for this study. Thus, a total number of forty local area newspapers from five different cities of Andhra Pradesh were selected for this study. Based on the methodology of the scoring explained above, the collected questionnaires were scored separately for all the seven strategic paths and media management perceptions, as detailed earlier from all the five cities in Andhra Pradesh. The following statistical analysis was made on the data collected. To find out the differences on strategic paths and media management perceptions among different city local area newspapers, ANOVA was used and post hoc analysis using Scheffe's Confidence Interval was used where obtained F-value was significant. Pearson Coefficient Correlation was used to find out the relationship between the selected strategic paths and media management and the number of circulation being made by the local area newspapers. In all cases 0.05 level was fixed to test the hypothesis set for this study.*

**Key Words:** - Strategic paths, Media management, Local area newspapers Planning.

### **INTRODUCTION, BACKGROUND AND OBJECTIVES OF THE STUDY**

A newspaper is a periodical publication containing news, other informative articles, and usually advertising. A newspaper is usually printed on relatively inexpensive, low-grade paper such as newsprint. The news organisations that publish newspapers are themselves often metonymically called newspapers. Most

newspapers now publish online as well as in print. The online versions are called online newspapers or news sites. Newspapers are typically published daily or weekly. News magazines are also weekly, but they have a magazine format.

Most newspapers are businesses, and they pay their expenses (such as journalists' wages, printing costs, and distribution costs) with a mixture of subscription revenue, news-stand sales, and advertising revenue (other businesses or individuals pay to place advertisements in the pages, including display ads, classified ads, and their online equivalents). Some newspapers are government-run or at least government-funded; their reliance on advertising revenue and on profitability is less critical to their survival. The editorial independence of a newspaper is thus always subject to the interests of someone, whether owners, advertisers, or a government. Some newspapers with high editorial independence, high journalism quality, and large circulation are viewed as newspapers of record.

## **INDIAN NEWSPAPER INDUSTRY**

In 1976, our country's population was 775 million, one copy of a newspaper appeared for every 80 people. A quarter century later, as the population passed one billion, one newspaper was available for every 20 Indians. By mid-2009, India had 68,000 newspapers, with more expected to emerge. They sell for a few cents per edition. Unlike online, print does not require electricity and Internet infrastructure. Power shortages still occur in some parts of India. Broadband penetration in 2009 was about 4 per cent, and concentrated in major cities. It is observed that rising literacy in India will mean an audience for printed newspapers well into this century. In 1976, 35 per cent of Indians could read. By 2008, the figure was 70 per cent. Rising youth literacy, at 82 per cent in 2009 does suggest plenty of potential readers. But those youngsters are more likely to seek their news and information online, just as their counterparts do in other countries. As cheap broadband inevitably becomes available, newspaper circulation will decline. A July 2009 report from Forrester Research estimated that about 2.2 billion people worldwide would be online by 2013 – a global increase of 45 per cent. Almost half of those new users would be in Asia, with 17 per cent in China alone. Mr. Wilkinson, the Executive Director of the Dallas, Texas-based International Newspaper Marketing Association (INMA) commented on Indian Print-media.

## **NEWSPAPERS AND FOREIGN DIRECT INVESTMENT (FDI)**

It was in June 2002 that the National Democratic Alliance Government lifted the nearly 50-year-old ban on foreign investment in the print media. At that time, the Union Cabinet permitted 26 per cent Foreign Direct

Investment (FDI) in news and current affairs publications and 74 per cent foreign investment in the non-news and non-current affairs journals, <sup>The Hindu (2009)</sup>. The government permitted country-specific editions published by a local company, with a foreign partnership limit of 26 per cent, though local editions of foreign media were not allowed. June 2008 witnessed the launch of The International Herald Tribune as a branded world business section inside the Financial Chronicle. Deccan Chronicle Holdings, renowned for Deccan Chronicle, India's fourth largest English daily, launched the Financial Chronicle in April 2008. The newspaper is published five days a week from Hyderabad, Chennai and Bangalore.

## ADVERTISING

The Indian media and entertainment industry is poised to touch Rs.1,15,700 crore by 2012, driven by increased advertising spend. The Indian media and entertainment industry is growing at a pace of 19 per cent per annum. It is expected to touch Rs.1,157 billion by 2012, reports <sup>Mint (2010)</sup>. The English media forms only 15 per cent of the total news paper market and has seven times lesser readership than its Hindi counter parts. Despite the numbers, it claims more than half the share of total advertising pie of the print space, according to an industry estimate prepared by brokerage firm, Motilal Oswal print media report. The higher ad rates come into play in the greater revenue generation witnessed in English media. The perception that the purchasing power of the English newspaper reader is much higher than that of their Hindi newspaper counterparts is the reason for the higher ad rates. A rise in the ad rates of newspapers published in regional languages and Hindi is expected as advertisers are turning their attention to rural areas and small towns in search of generating more demand for their products and services. The Indian print media scene is comprised of 62,483 registered newspapers.

## THREATS TO NEWSPAPER INDUSTRY

The newspaper industry sees no threat to its survival in the foreseeable future from the digital media contrary to the raging debate over the sustainability of the print media due to the advent of the digital newspapers and internet reports <sup>The Hindu (2009)</sup>. India has the second largest print market in the world with a readership base of over 350 million. The influx of digital media penetration, market saturation and changing media consumption habits has led to decelerating circulation and readership in the once developed international markets. The Indian market, however, continues to stand due to the low level of print media penetration.

## STRATEGIC MANAGEMENT

“**Strategic management** can be defined as the art and science of formulating, implementing and evaluating cross-functional decisions that enable an organisation to achieve its objectives.” (David 2009).

“Strategic management is defined as the process by which managers of the firm analyze the internal and external environments for the purpose of formulating strategies and allocating resources to develop a competitive advantage in an industry that allows for the successful achievement of organizational goals” (Cox *et al.*, 2012)

### Strategic Thinking

Strategic thinking involves the generation and application of unique business insights to opportunities intended to create competitive advantage for a firm or organization. It involves challenging the assumptions underlying the organization’s strategy and value proposition. Mintzberg wrote in 1994 that it is more about synthesis (i.e., “connecting the dots”) than analysis (i.e., “finding the dots”). It is about “capturing what the manager learns from all sources (both the soft insights from his or her personal experiences and the experiences of others throughout the organization. The hard data from market research and the like) and then synthesizing that learning into a vision of the direction that the business should pursue.” Mintzberg argued that strategic thinking is the critical part of formulating strategy, more so than strategic planning exercises (Henry Mintzberg, 1994).

### Strategic Planning

Strategic planning is a means of administering the formulation and implementation of strategy. Strategic planning is analytical in nature and refers to formalized procedures to produce the data and analyzes used as inputs for strategic thinking, which synthesizes the data resulting in the strategy. Strategic planning may also refer to control mechanisms used to implement the strategy once it is determined. In other words, strategic planning happens around the strategy formation process (Mintzberg, Henry and, Quinn, James Brian, 1996).

Porter wrote in 1980 that formulation of competitive strategy includes consideration of four key elements:

1. Company strengths and weaknesses;
2. Personal values of the key implementers (i.e., management and the board);
3. Industry opportunities and threats; and
4. Broader societal expectations (Porter, Michael E. 1980).

- ◆ **External environment:** PEST analysis or STEEP analysis is a framework used to examine the remote external environmental factors that can affect the organization, such as political, economic, social/demographic, and technological. Common variations include SLEPT, PESTLE, STEEPLE, and STEER analysis, each of which incorporates slightly different emphases.
- ◆ **Industry environment:** The Porter Five Forces Analysis framework helps to determine the competitive rivalry and therefore attractiveness of a market. It is used to help determine the portfolio of offerings the organization will provide and in which markets.
- ◆ **Relationship of internal and external environment:** SWOT analysis is one of the most basic and widely used frameworks, which examines both internal elements of the organization — Strengths and Weaknesses and external elements — Opportunities and Threats. It helps examine the organization's resources in the context of its environment.

## NEED OF THE STUDY

For different reasons, the media industry offers an ideal, albeit underdeveloped, field for strategic process research for the most. In many countries the media are subject to deep, radical changing processes. In India, starting with the television, digitization of products and production processes and the emergence of the Internet, the competitive situation has changed, and is still changing profoundly, the market structures and the world of information producing and consuming. Although there is no doubt that this issue that influences the media industry indicates relevant changes, there is no clear idea of their impact on an organizational and strategic level. Therefore, the key question at this moment for media management is how media organizations should cope with these developments.

## RESEARCH PROBLEM

A newspaper is a publication intended for a broad audience that appears regularly, often daily, and claims to contain factual accounts of recent events. Usually newspapers are published with the intention of making a profit. Frequently, their factual content is accompanied by advertisements and non-factual material intended as entertainment. Technological innovation made the modern newspaper possible. Only after the invention of paper made from wood pulp did low-cost, low-quality paper become readily available. The rise of the paper industry made paper cheap, which meant that newspapers could be printed for reasonable prices. Industrialization and new global markets, especially in raw materials, helped to increase production leading to inexpensive, mass-produced

paper. Newspaper contains more than newspaper stories. Classified advertisements, for example, can tell us about changes in prices of apartment rentals over-time, or about the titles or salary ranges for various kinds of jobs. Display advertising can tell us how many new movie theaters are opening in a town or what kinds of food people are looking for in the supermarkets. Even long-running advice columns can give us this kind of evidence, showing changes over time in what people considered to be problems and what newspaper writers considered to be solutions for those problems.

## SCOPE OF THE STUDY

The study will cover strategy and media management of local area newspapers. Among different local area newspapers, the investigator will randomly select forty local area newspapers from five different cities in Andhra Pradesh as a sample unit for the purpose of the study.

## OBJECTIVES

This study will primarily aim at identifying the strategic paths and media management of local area newspapers. With this end, in view the following objectives will be formulated.

1. To classify the local area newspapers based on the target audience and find out the differences, if any, among them in relation to the number of circulation in selected cities of Andhra Pradesh.
2. To study the reach of local area newspapers among different types of readers.
3. To study whether the history of newspapers (number of years of publication) has any association with number of readers of the newspapers.
4. To study whether the frequency of publication of newspapers has any association with the number of readers of that newspaper.
5. To study different methods of distribution of news papers and its association with number of circulation per issue.
6. To study the promotional strategies of different local newspapers and its differences based on their categories.
7. To study the strategies and media management policies adapted by local area newspapers to counter the stiff competitions.
8. To study the media management of the local area newspapers and analyze its effect on the number of circulation of these papers.

9. To study the dependency of local area newspapers on ad and managing the revenue costs.

## HYPOTHESES

In order to serve the above stated objectives, the following hypothesis will be proposed and tested in this study.

- (a) There would not be any significant difference among local area newspapers of selected cities on strategic path and management such as, **planning** among the papers of different cities in Andhra Pradesh.

## SIGNIFICANCE OF THE STUDY

As in any economic downturn, advertising became the first causality as companies cut corners in a bid to stay afloat. Naturally, this hit media business including newspaper industry. After all profitability in the newspaper industry is largely driven by advertising revenues with circulation levels and readership profile all being virtual proxies for advertising effectiveness.

1. The study is significant in finding out the readers' perception on different local area news papers in selected cities of Andhra Pradesh.
2. The study is significant in finding out how far readers' were informed with the news stories and advertisements, particularly with regard to that local area.
3. The study is significant in finding out the strengths and weakness of the local area news papers in publishing these papers.
4. The study is significant in assessing the differences existing in different strategy and media management techniques.
5. The study is significant in highlighting how far the local area news papers were able to make profit with limited number of circulation, while newspaper industry world-wide facing declining trends.

## RESEARCH METHODOLOGY

The study will investigate the strategic paths and media management of local area newspapers in Andhra Pradesh. The local area newspapers otherwise called community newspapers are published from different cities of Andhra Pradesh. These papers mainly depend on advertisement income. Because of stiff competition from established regular newspapers, the strategic paths and media management of local area newspapers is different and unique to reach more specifically the target population for whom these papers are being published.

## SELECTION OF SAMPLES

Stratified sampling method is followed in this study, out of the total population, that is, the total number of local area newspapers from different cities of Andhra Pradesh. Only ten papers from Vijayawada, ten from Visakhapatnam, ten from Guntur, five from Kadapa and five from Nellore were selected as samples for this study. Thus, a total number of forty local area newspapers from five different cities of Andhra Pradesh were selected for this study.

## QUESTIONNAIRE

In this study, specially designed questionnaire was adopted to find out the strategy and media management of local newspapers. The investigator developed a set of questionnaire consisting of two parts. Part-I deals with eliciting the general information about the newspaper, such as name of the company, phone number, address, category of the newspaper, year of establishment, frequency of publications, etc.

The questionnaire was framed by using Likert Scale of 5 points scoring system, ranging from strongly agreed, agreed, neutral, disagree and strongly disagree. The scorings for positive questions were as follows:

Strongly agreed	5
Agreed	4
Neutral	3
Disagree	2
Strongly Disagree	1

## COLLECTION OF DATA

The questionnaire developed was administered to the selected customers with a request that the data collected would be used only for the intended research. The investigator fixed up a time and date to collect the filled up questionnaire. Accordingly, the investigator made suitable follow up to request the person in charge to give their frank views on each of the statement in the questionnaire. Duly filled in questionnaire were collected by the investigator personally.

## LIMITATIONS OF THE STUDY

The Findings of this study were limited to the following aspects.

1. This study was limited to local area newspapers from five cities in Andhra Pradesh, namely, Vijayawada, Visakhapatnam, Guntur, Kadapa and Nellore.
2. For the purpose of the study, local area newspaper means a periodical published to cover a whole or part of the city, from which it is being published with a target to cover particular community or region.
3. The study has not taken into consideration, the regular newspapers regional supplementary publications.
4. For the purpose of the study, data were collected through a well planned questionnaire.
5. Survey method was followed to collect data for this study.
6. The questionnaire was distributed to the subjects by the investigator personally, which may be taken as a limitation to this study.
7. This study was conducted only among 40 local area news papers from 5 cities of Andhra Pradesh.
8. Responses were obtained from the Editor-in-charge or person in charge of administration of the Local Area newspapers and the possibility of individual bias were considered as limitation to this study.

## STATISTICAL ANALYSIS

Based on the methodology of the scoring explained above, the collected questionnaires were scored separately for all the seven strategic paths and media management perceptions, as detailed earlier from all the five cities in Andhra Pradesh. The following statistical analysis was made on the data collected:

- 1) Tables were drawn and percentages were calculated to find out the strategic paths media management policies adopted for each for each of the dimensions.
- 2) Descriptive statistics mean, standard deviation was calculated to find out the levels of strategic paths and media management in conducting the local area newspapers.
- 3) To find out the differences on strategic paths and media management perceptions among different city local area newspapers, ANOVA was used and post hoc analysis using Scheffe's Confidence Interval was used where obtained F-value was significant.
- 4) Pearson Coefficient Correlation was used to find out the relationship between the selected strategic paths and media management and the number of circulation being made by the local area newspapers.

In all cases 0.05 level was fixed to test the hypothesis set for this study.

## SELECTION OF STRATIC PATHS AND MEDIA MANAGEMENT VARIABLES

The strategic paths and media management of local area newspapers of Andhra Pradesh were

### PLANNING

**Survey:-**Survey method is quickly becoming the number one tool that market researches use to gather data. The advent of online survey tools has led to widespread use of quantitative surveys in order to collect, analyze, and use data that can contribute to a more effective business model, better marketing strategies, improved customer service and more.

Survey research methods have been shown time and time again to benefit market researchers and improve return on investment. Following are the benefits and weakness of survey research.

**Data Collection:-**Data collection is much easier with surveys, which tend to use easy to read data sources that can be compiled and analyzed as needed for your market research needs. The qualitative research techniques of other market research methods may yield some interesting answers.

**Sample Size:-**Sample size is one of the most underrated aspects of all types of research, including market research. It is found small sample of participants is enough to make any firm conclusions. Surveys allow reach possible participants if necessary, which ensures a more accurate sample in which to draw conclusions.

**Candid Responses:-**The anonymity of surveys allows people to feel more candid with their responses. To get accurate data, participants must be as honest as possible with their answers. Surveys provide more honest responses than other types of research methodology, especially, if it is clear that the answers will remain confidential.

**COLLECTION OF DATA:-**The questionnaire developed was administered to the selected customers with a request that the data collected would be used only for the intended research. The investigator fixed up a time and date to collect the filled up questionnaire. Accordingly, the investigator made suitable follow up to request the person in charge to give their frank views on each of the statement in the questionnaire. Duly filled in questionnaire were collected by the investigator personally.

### Analysis on Local Area News Papers' Planning

Strategic paths and media management of the LANP were analyzed through the following 8 statements.

#### Table II

**Statement Numbers, the Statements, Responses on Planning of Local Area News Papers of different cities of Andhra Pradesh**

Response/ State	Guntur		Kadapa		Nellore		Vijayawada		Visakhapatnam		Total

<b>Total</b>	<b>10</b>	<b>100</b>	<b>5</b>	<b>100</b>	<b>5</b>	<b>100</b>	<b>10</b>	<b>100</b>	<b>10</b>	<b>100</b>	<b>40</b>	<b>100</b>

Analysis of results on LANP responses on strategic paths and media management dimension planning proved that 22 out of 40 forming 55 per cent strongly agree and 7 forming 17.5 per cent agree while 10 per cent disagree and 5 per cent strongly disagree to the statement LANP is to cover only regional and local area news.

Similarly 45 per cent strongly agreed and 25 per cent agreed, 10 per cent disagree and 2.5 per cent strongly disagree to the statement that LANP are to publish advertisements.

Further the intention of LANP was proved by 32.5 per cent strongly agreed and 42.5 per cent agreed to the statement. The LANP is planning to cover more areas of advertisements.

32.5 per cent of the respondents disagreed and 12.5 per cent strongly disagreed while 2.5 per cent strongly agreed and 12.5 per cent agreed for the statement that “The LANP plans to cover local area sports events in future”. The planning strategy of the LANP is not in favor of local area sports.

Only 12.5 per cent expressed strong agreement and 30 per cent agreed, 35 per cent expressed neutral, 15 per cent disagree and 7.5 per cent strongly disagree for the statement. “We incorporate changes in the government in future planning of expansions.”

For the statement, “we make adequate planning in collection of news” 12.5 per cent strongly agreed, 45 per cent agreed while 12.5 per cent disagree and 2.5 per cent strongly disagree. This proved that the LANP is interested in collection of news, especially local area and regional news.

37.5 per cent strongly agreed and 42.5 per cent agreed that LANP take adequate planning in collection of advertisements. Similarly 42.5 per cent strongly agreed and 37.5 per cent agreed that the LANP take adequate planning to increase number of copies of circulation.

The responses numbering 40 from 5 cities of Andhra Pradesh were obtained and scored based on five point scale. The obtained data were statistically analyzed the descriptive statistics on Mean, standard deviation, Minimum and the Maximum scores are presented in **Table III**

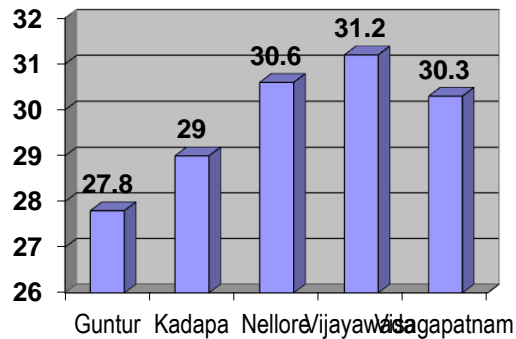

### Descriptive Statistics Strategic Path and Media Management Planning Dimension

Cities	N	Mean	Std. Deviation	Minimum	Maximum
Guntur	10	27.80	2.15	24	31
Kadapa	5	29.00	3.46	26	34
Nellore	5	30.60	0.89	30	32
Vijayawada	10	31.20	3.79	25	36
Visakhapatnam	10	30.30	2.67	24	34
<b>Total</b>	<b>40</b>	<b>29.78</b>	<b>3.02</b>	<b>24</b>	<b>36</b>

The mean values of the respondents of Guntur were 27.80, Kadapa was 29.00, Nellore was 30.60, Vijayawada was 31.20 and Visakhapatnam was 30.30. The obtained mean values of LANP of different cities of Andhra Pradesh are presented through bar diagram for better understanding of the results presented in

**Figure- 1. Showing the Mean Values of Respondents on Planning Dimension**

The obtained results proved that there were mean differences on the scores of responses from LANP of different cities in Andhra Pradesh and to test the statistical significance ANOVA was employed and the results presented in table IV.

## DISCUSSIONS ON HYPOTHESIS

There are many different frameworks and methodologies for strategic planning and management, Rothaermel, F.T. (2012) suggested some very basic phases: 1) analysis or assessment, where an understanding of the current internal and external environments is developed, 2) strategy formulation, where high level strategy is developed and a basic organization level strategic plan is documented, 3) strategy execution, where the high level plan is translated into more operational planning and action items, and 4) evaluation or sustainment / management phase, where ongoing refinement and evaluation of performance, culture, communications, data reporting, and other strategic management issues occurs. Keeping these principles in mind the investigator made a detailed study how local area newspapers of selected cities in Andhra Pradesh follow strategic path and media management. For this purpose, the investigator formulated the following hypotheses to be tested scientifically.

1. There would not be any significant difference among local area newspapers of selected cities on strategic path and management such as, planning among the papers of different cities in Andhra Pradesh.
2. The media management strategic path of LANP on planning dimension was assessed through 8 specific statements responded in Likert Scale. The frequency distribution table presented in Table I proved that the LANP are planning to publish regional and local area news, to meet the expenses LANP depends on advertising and

planning to cover more areas of advertisements, no so much interested in local area news on sports, and planning to increase number of copies of circulation. The average mean value 29.78 out of the maximum 40 suggests the LANP in Andhra Pradesh was to follow adequate planning strategy in media management. The mean values of the respondents of Guntur were 27.80, Kadapa was 29.00, Nellore was 30.60, Vijayawada was 31.20 and Visakhapatnam was 30.30. The mean differences among selected cities' LANP were statistically analyzed. The obtained F-value of 2.09 was less than the required table F-value to be significant at 0.05 level. Hence, it was found there was no significant difference and the formulated hypothesis No. 1 that there would not be any significant difference among local area news papers of selected cities of Andhra Pradesh in planning dimension was accepted.

**Table IV:-Differences of Responses on Planning Dimension of Local Area News Papers of different cities of Andhra Pradesh**

	Sum of Squares	Df	Mean Square	Obtained F	Required F at 0.05 level
Between Groups	68.48	4	17.12	2.09	2.63
Within Groups	286.50	35	8.19		
<b>Total</b>	<b>354.98</b>	<b>39</b>			

Not Significant

The results presented in Table 5.9 proved that there was no significant difference among the responses of LANP of selected cities in Andhra Pradesh on Planning dimension as the obtained F-value of 2.09 is less than the required table F-value of 2.63 to be significant at 0.05 level. This proved that there were no significant differences in planning strategy and media management planning among LANP of selected cities in Andhra Pradesh.

**FINDINGS:-**The media management strategic path of LANP on planning dimension was assessed proved that the LANP are planning to publish regional and local area news, to meet the expenses LANP depends on advertising and planning to cover more areas of advertisements. Not so much interested in local area news on sports, and planning to increase number of copies of circulation. The mean differences among selected cities' LANP found to be insignificant and was found the LANP studied were uniform approach on planning strategy.

## CONCLUSIONS

1. The findings of the study proved that strategic path and media management of LANP can be accessed through selected questionnaire with seven distinct dimensions, planning,.
2. Local area news papers (LANP) of selected cities in Andhra Pradesh are in existence for more than 12 years and a majority is established within the past 5 years.
3. It was concluded that there were no significant differences among LANP of Guntur, Kadapa, Nellore, Vijayawada and Visakhapatnam of Andhra Pradesh on planning, strategies.
4. It was found that there was significant difference among LANP of select cities and post hoc analysis proved Nellore LANP was significantly better than Guntur and other comparisons were not significant.
